

ALL EYE PROTECTION IS NOT THE SAME

Many safety glasses and goggles protect against impact, but do little to protect against chemical splash. In a laboratory, splash can come from any angle (including from the person next to you—or behind you).

PROBLEM: Chemical splash may enter from sides or through vent slats.

Safety Glasses With Vented Side Shields

PROBLEM: Chemical splash may enter from sides.

Safety Glasses With Unvented Side Shields

PROBLEM: Rigid plastic lens does not seal completely against face. Chemical splash may enter from sides.

Visorgogs®

PROBLEM: Chemical splash may enter through the vent holes.

Directly Vented Cover Goggles

ANSI standard Z87.1 certified

NOTE: Vent cover should be down when in use.

Indirectly Vented Cover Goggles
