

Cisco AnyConnect

Connecting to VPN for the First Time

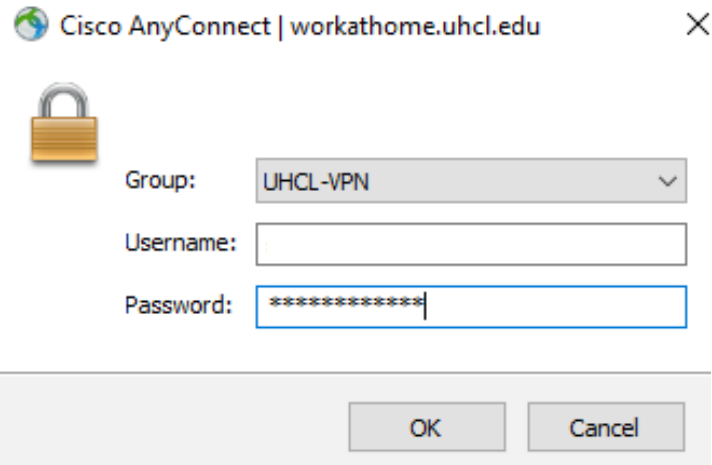

- In any web browser go to <https://workathome.uhcl.edu>
- Type your UHCL Username and password (without the domain uhcl\ in front and not your email address).
- Click Logon, then Continue
- Wait for the website to detect your OS and computer type then download and run the Cisco AnyConnect client.
- After the install is complete, open the software if it does not start on its own.
- You should get the screen below. In the open field, enter: workathome.uhcl.edu

- If you click on the gear icon, your settings should like those in the example below.
- Close this window and select Connect from the window above.

- Enter your UHCL Username and Password.
- Click OK

Cisco AnyConnect | workathome.uhcl.edu

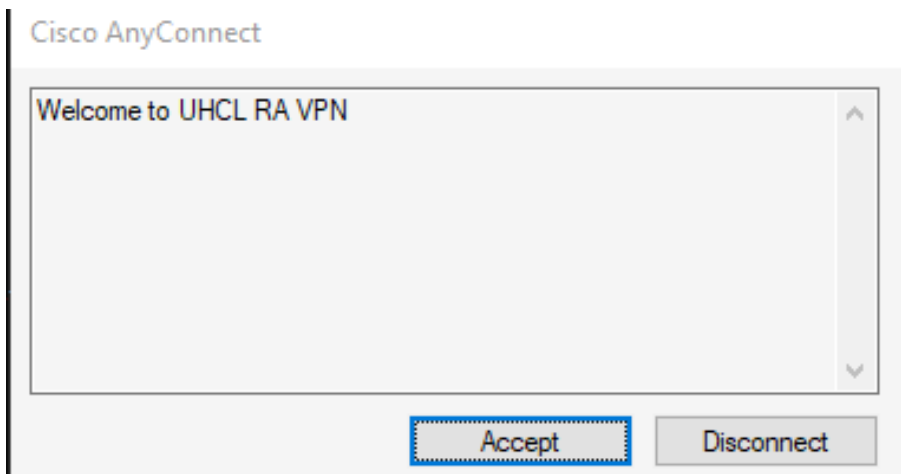

Group: UHCL-VPN

Username:

Password:

OK Cancel

- One the next screen, select Accept.
- You should now be connected to UHCL VPN. ALL traffic will be going through this VPN connection until you disconnect.

Cisco AnyConnect

Welcome to UHCL RA VPN

Accept Disconnect

Connect to your Office Computer

Before you attempt a remote connection, make sure that your office computer is powered on and you know the exact name of your computer. Your computer's name should begin with the first letter of your building, your suite number, dash (-), then D (for desktop), followed by your computer's tag number (minus the leading 0). Example B2300-D45678. To verify your computer's tag number, please call or email the Support Center at 281.283.2828 or supportcenter@uhcl.edu.

- Search for the Remote Desktop App on your computer and open it and you should get a window that looks like the example on the right.
Mac Users: You may need to go to the App Store and download the "Microsoft Remote Desktop" App.
- Type in your computer name and press Connect.
- You should be prompted to log in with your usual UHCL username and password.
- You should now be connected to your office computer and have access to all of the software and data on your computer.
- If your connection fails, please make note of the error and contact the Support Center for assistance.
