

UHCL Cyber Security Institute Seminar Series

University
of Houston
Clear Lake

Cybersecurity for the Small Business and Everyday Users

Most large companies have the resources and personnel to secure their networks from cyber-attackers. However, most small businesses and average users do not have the money or technical savvy to do so. Hackers are targeting smaller businesses at a growing rate due to this.

“Within 6 months of a cyberattack, 60% of small businesses are unable to recover and fail.”¹

Join us for relevant and practical tips and expert advice to increase the security of your digital assets. You will learn how to protect your personal life and your business from malicious cyber tactics. Most seminars convey what attendees should be doing, but lack the how of it. This seminar will present the what-can-be-done AND how to better secure your network, information systems and online experience. Learn how to view emails more securely, tips to secure web browsers, password techniques, setup two-factor authentication and much more. ¹<http://docs.house.gov/meetings/SM/SM00/20150422/103276/HHRG-114-SM00-20150422-SD003-U4.pdf>

Presenter: Brian M. Sudduth, PMP, CCNA, LSSGB

Training and Lab Coordinator for the UHCL Cyber Security Institute

Feb. 15, 2017 10:00 am—noon

University of Houston-Clear Lake
