Renaud Seigneuric, Dr, PhD, HDR, serves as Attaché for Science and Technology. He is part of the French Office for Science and Technology (OST), based in Washington DC. His office in Houston covers Texas, Louisiana, Oklahoma and Arkansas.

An Attaché for Science and Technology (or Science Attaché) acts as a liaison officer between main research and higher education institutions in France and their counterpart in the United States, thus creating new and developing existing partnerships between French and American institutions in Higher Education, Science, Innovation and R&D, in a large panel of scientific fields (more about our programs here https://france-science.com/). His latest main scientific event was a French American Innovation Days (FAID) entitled “Physical Sciences and Engineering Solutions for the Environment”.

Prior to joining the Embassy of France in the US, as a physicist by training, Renaud was tackling complex systems in Biology, Medicine (especially in oncology). His research interests aimed at using cutting-edge instruments and methods, in a quantitative, integrative and translational approach. He holds 6 patents (2 pending), and has been selected into the Who’s Who in the World since 2013. He is the author of “Practice of Science” (2021), a handbook for PhD students and Faculty, that was published a few months ago.
