National Aquatic Resources Surveys: Applications for Wetland Condition Monitoring and Assessment in Texas

Jenny W. Oakley *, Mandi Gordon, and George Guillen

Environmental Institute of Houston, University of Houston-Clear Lake

Society of Wetland Scientists
Corpus Christi, TX
June 3, 2016

Acknowledgements

- **Funding**

- Environmental Protection Agency (EPA)
- Texas Commission on Environmental Quality (TCEQ)

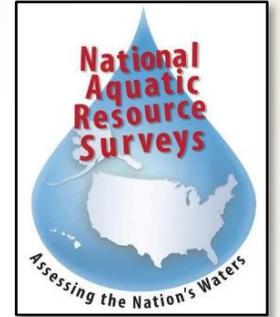

- **Field Team**

- John Ward (Botanist)
- Misty Shepard
- Kristen Vale
- Colby Lawrence
- Jeff Borksi
- Khem Paudel
- Alex Miller

National Aquatic Resource Surveys

- Status and change in the Nation's water quality

- Coastal Condition Assessment

- Lakes Assessment

- Rivers and Streams Assessment

- Wetland Condition Assessment

- Sampled 2011

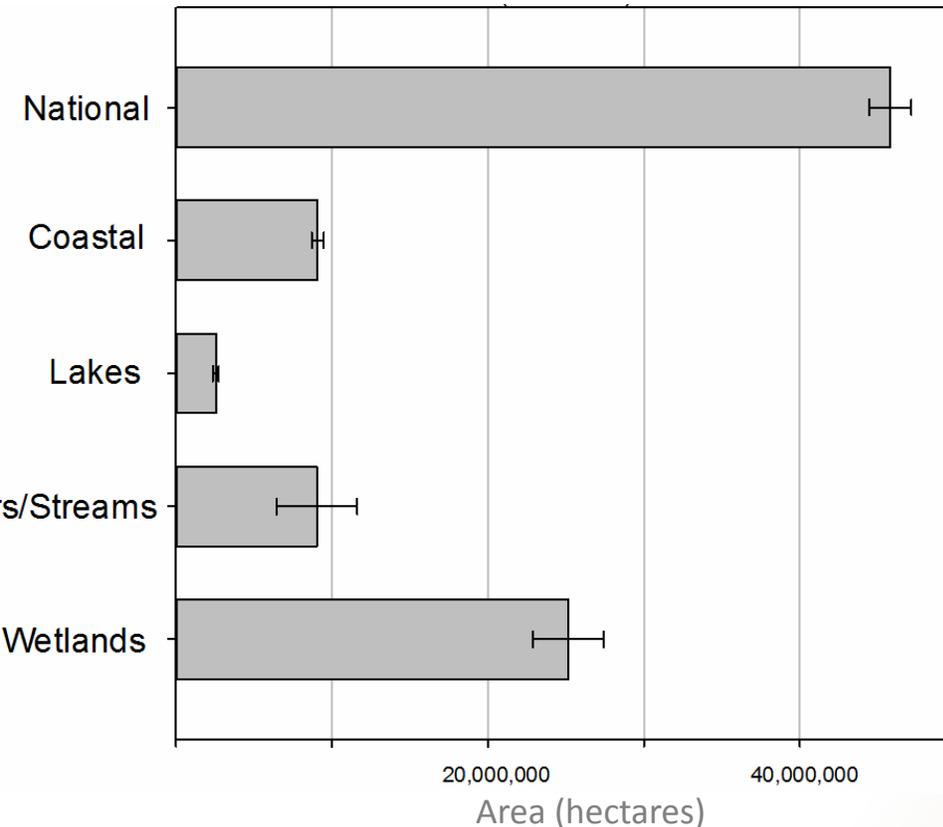

- Report released 2016

EPA-843-R-15-005

Rivers/Streams

Wetlands

Steve Paulsen, EPA Personal Communication

NWCA Design Background

- How does NWCA define wetlands?
 - Cowardin Definition
 - Not considered jurisdictional for purposes of CWA
- Which wetlands are included?
 - USFWS Wetland Status and Trends Program
 - Both Tidal and Non-tidal
 - < 10% of 1+ m deep open water
 - Not in crop production

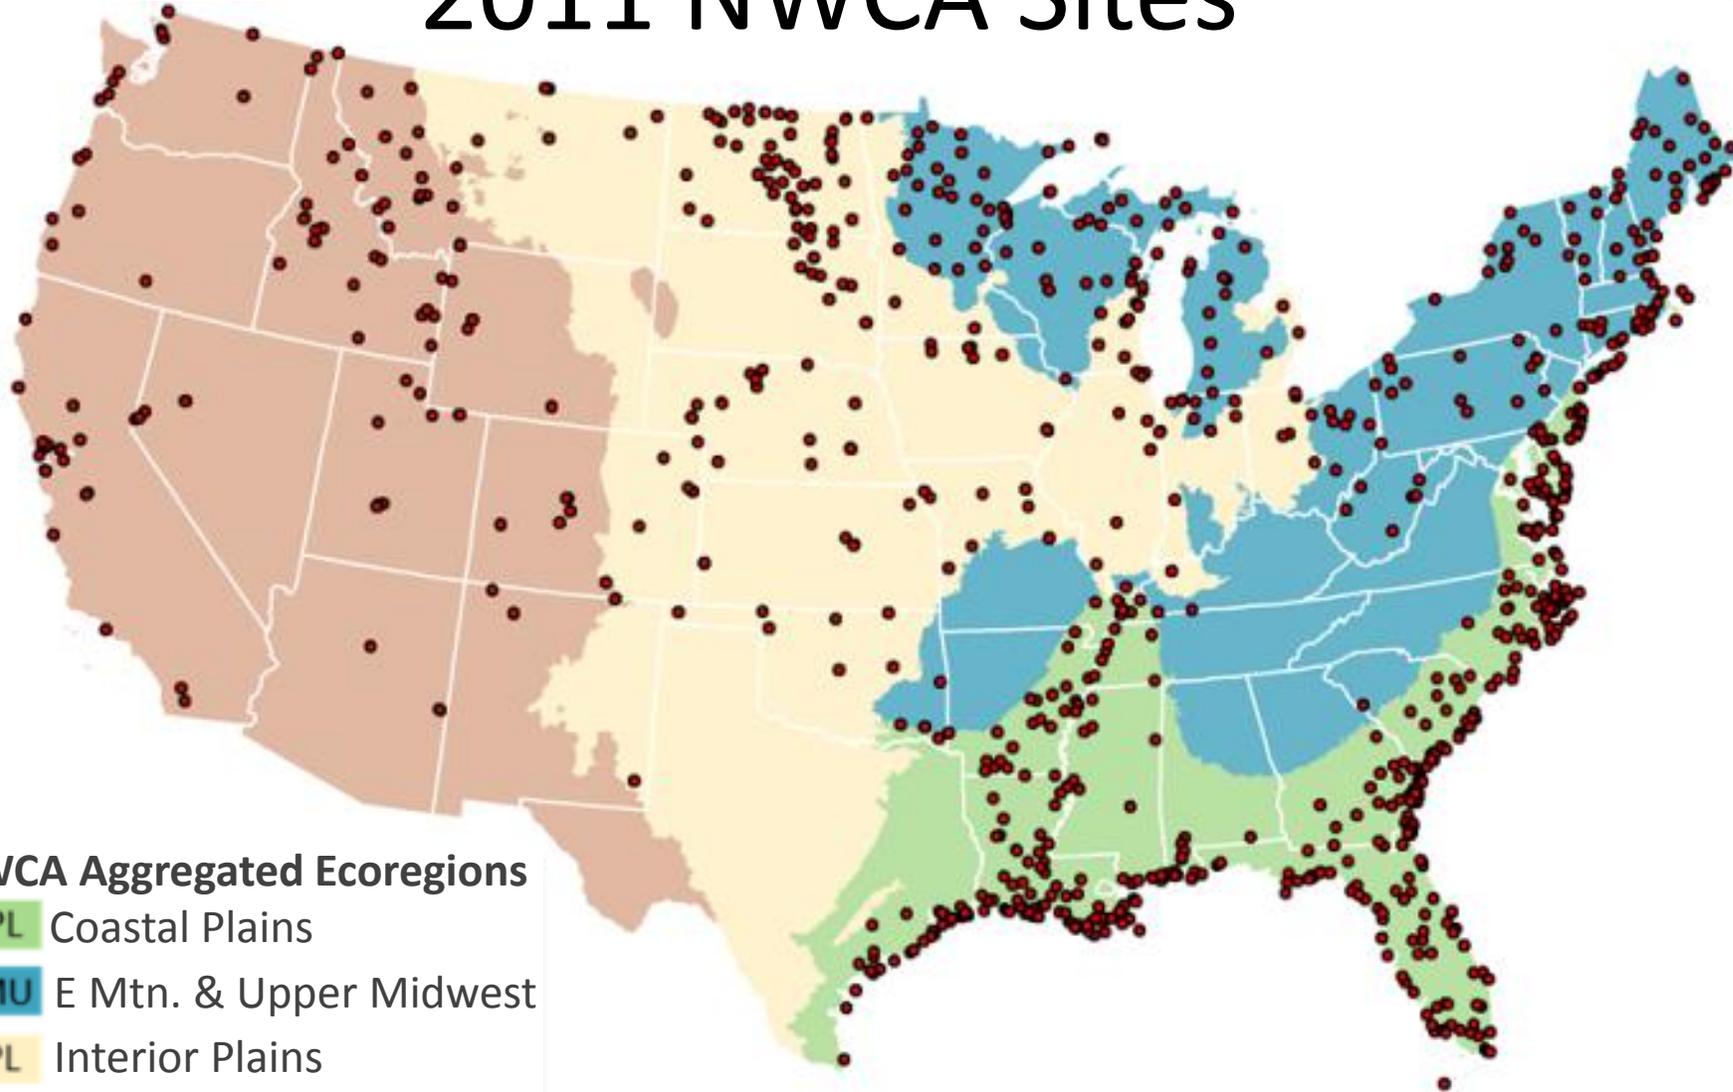

NWCA Design Background

- How are sites picked?
 - Probability-based sampling design (GRTS)
 - Number of sites relative to the total area of each wetland type
- What does the NWCA tell us?
 - Condition of wetlands
 - Condition classes: **poor**, **fair**, **good**
 - Stressor levels: **high**, **moderate**, **low**
 - Nationally *OR* by 4 major ecoregions

2011 NWCA Sites

NWCA Aggregated Ecoregions

- CPL** Coastal Plains
- EMU** E Mtn. & Upper Midwest
- IPL** Interior Plains
- W** West

1,179 Sites Nationally

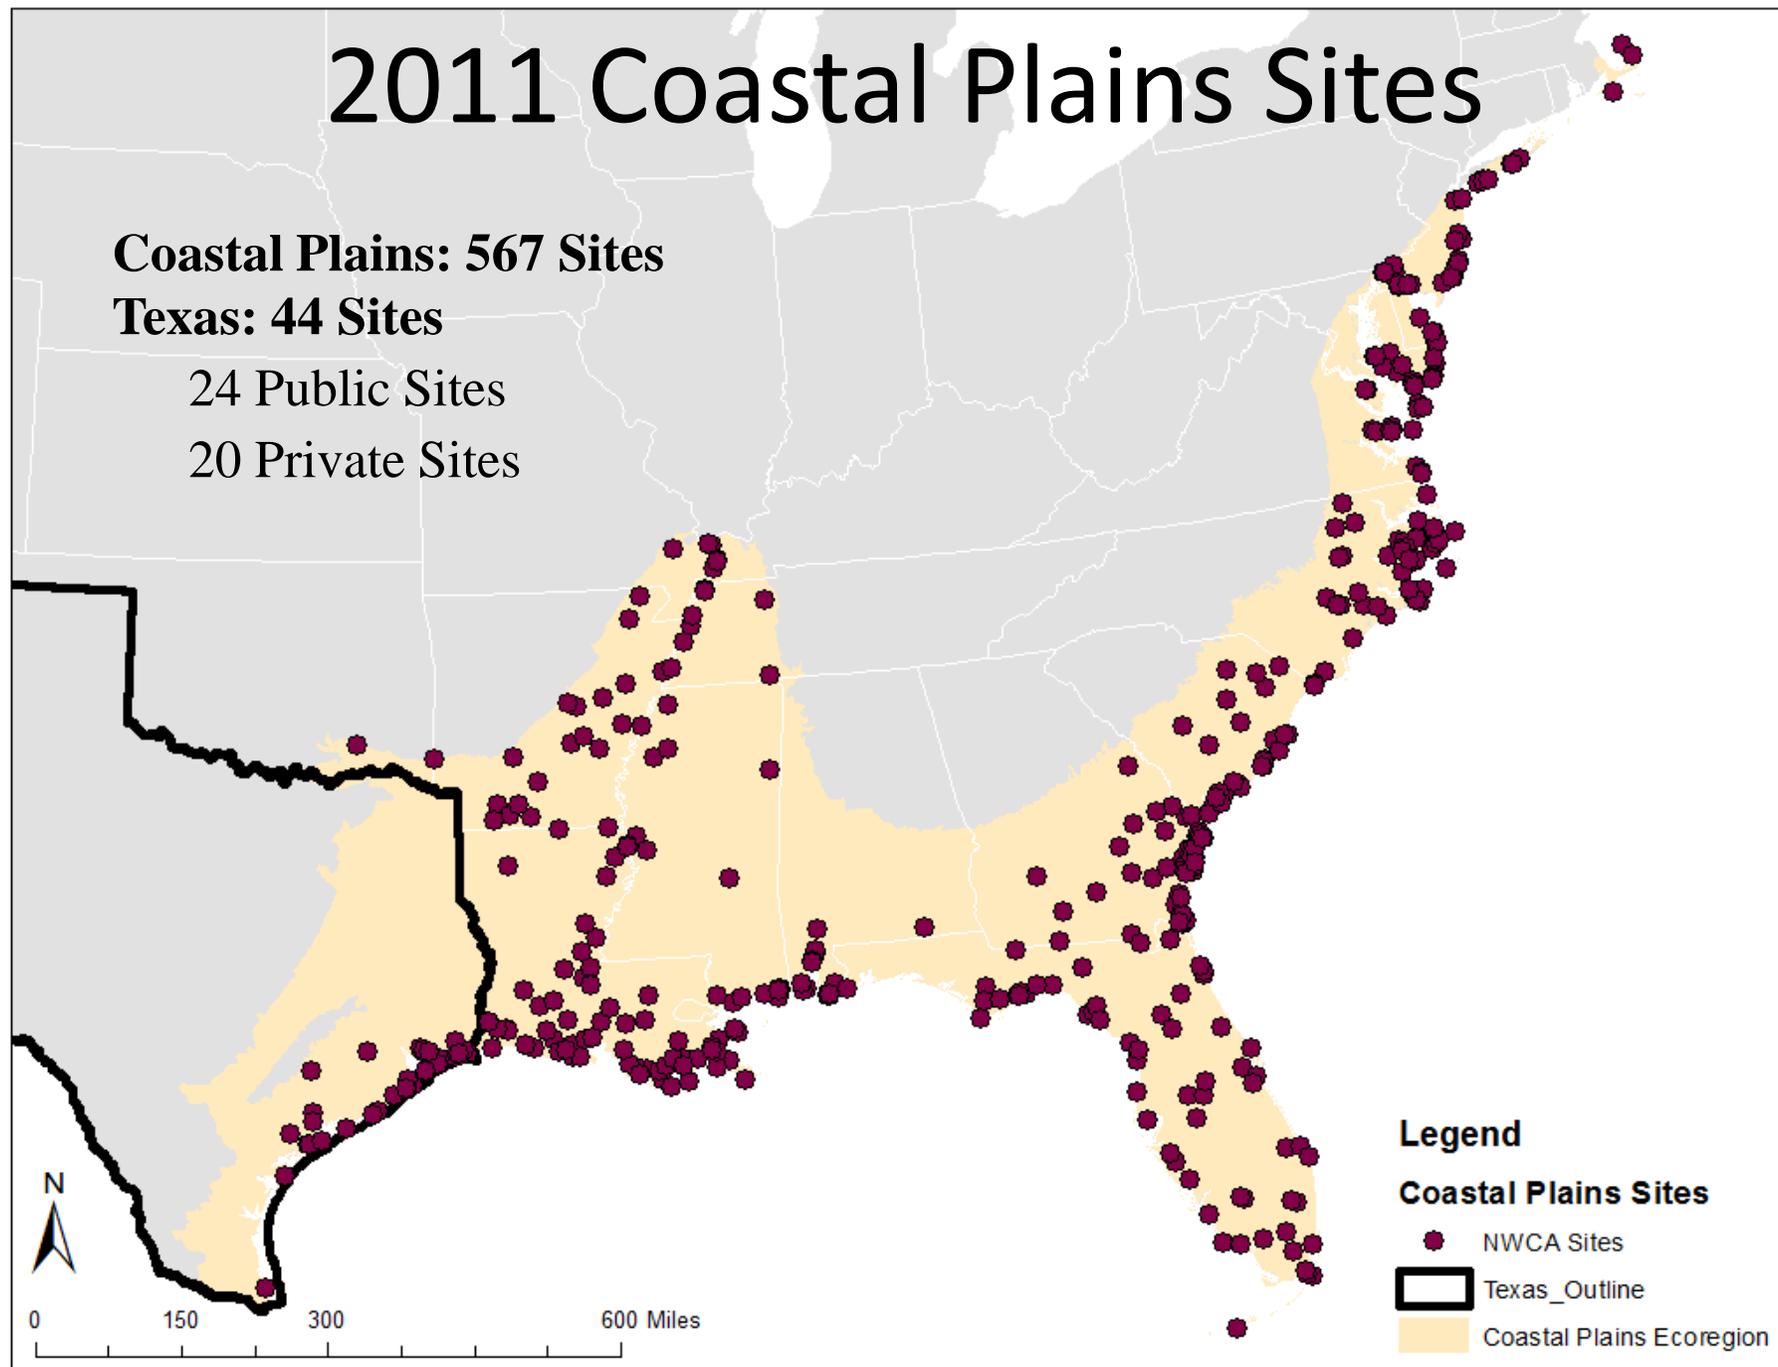

2011 Coastal Plains Sites

Coastal Plains: 567 Sites

Texas: 44 Sites

24 Public Sites

20 Private Sites

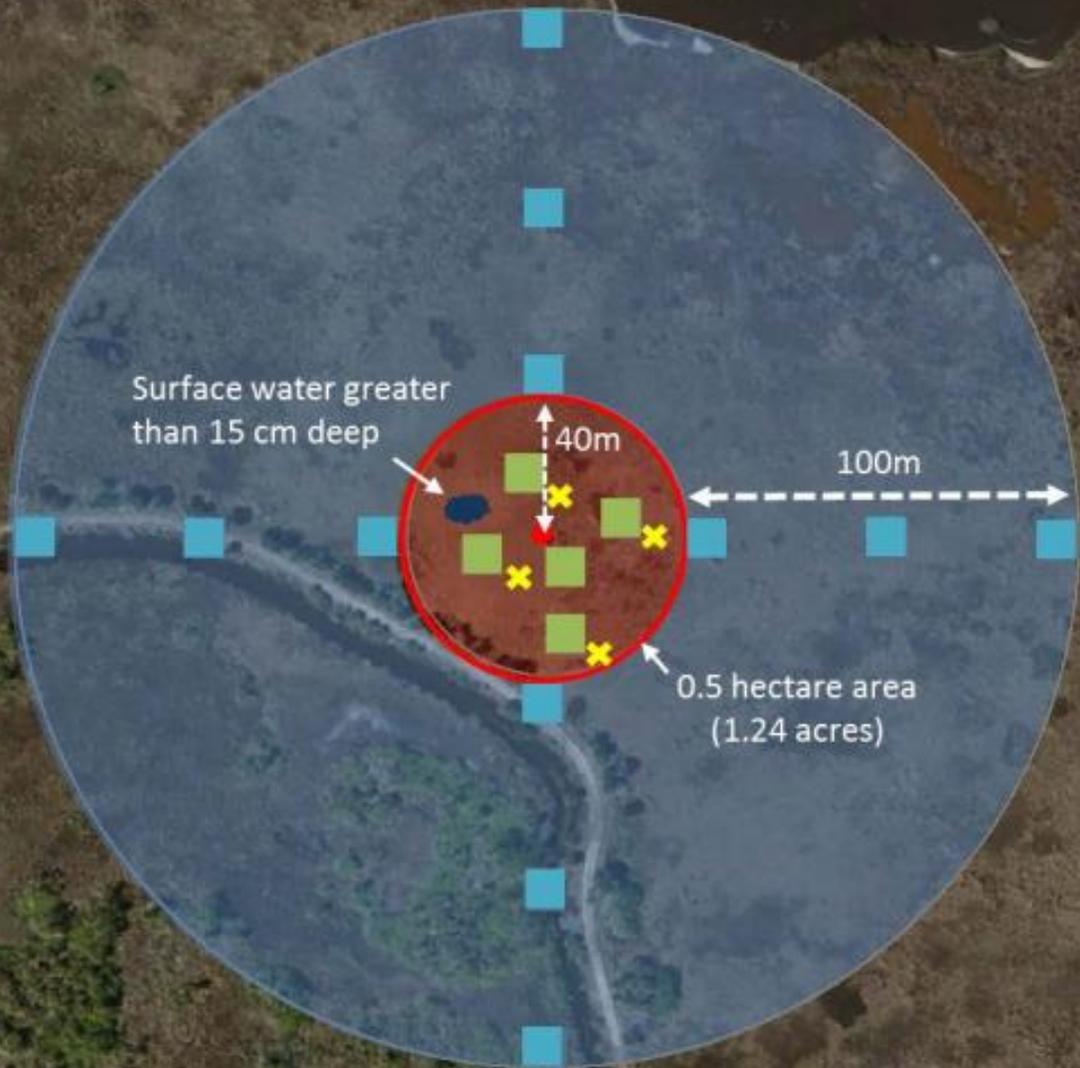

Vegetation

Water Samples

Site Characterization & Presence of Stressors

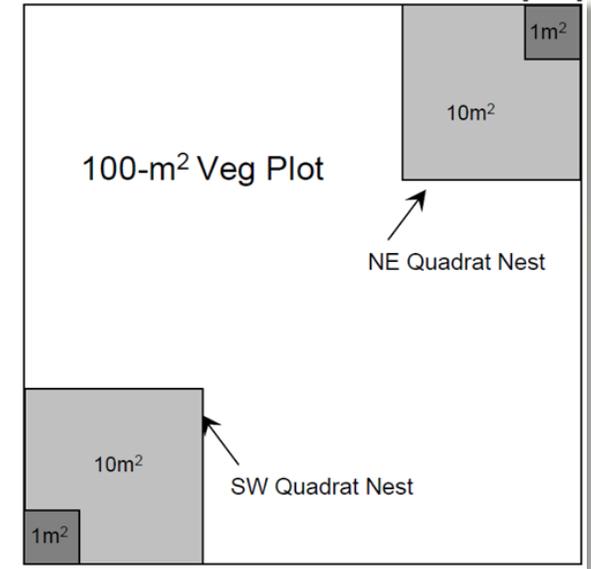

Soil Characterization & Samples

LEGEND

-  Sampling Point
-  Vegetation Plot
-  Sampleable Surface Water ($\geq 15\text{cm}$ deep)
-  Assessment Area
-  Soil Pit
-  Buffer Plot
-  Buffer Area

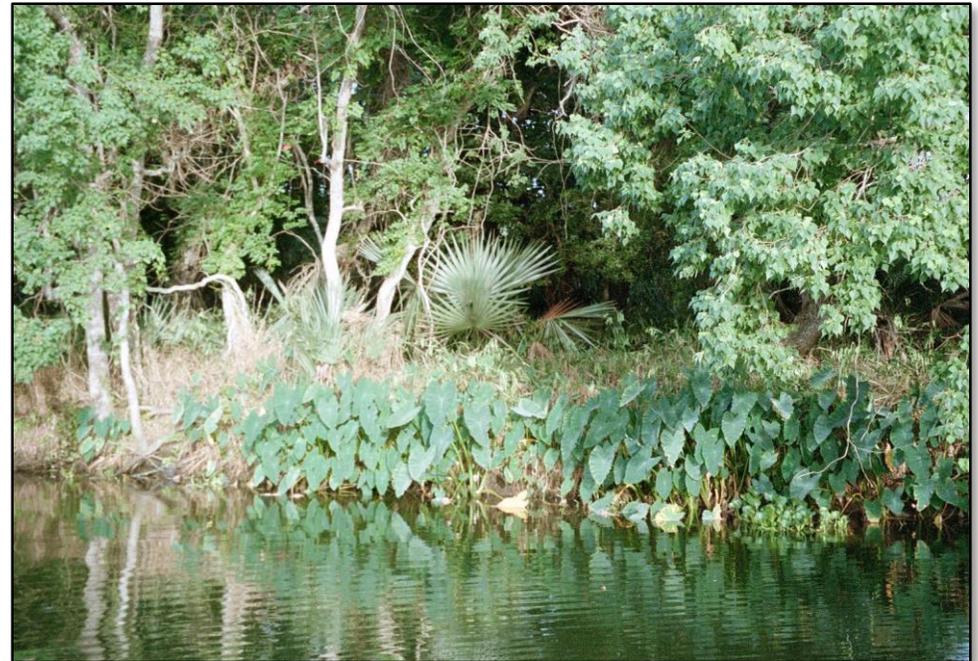

Biological Condition

- Identified all species of vegetation
 - Composition
 - Abundance
 - Trait Information
- **Vegetation Multimetric Index (VMMI)**
 - Floristic Quality Assessment Index
 - Relative Importance of Native Plant Species
 - Number of Plant Species Tolerant to Disturbance
 - Relative Cover of Native Monocot Species

Biological Indicator of Stress

- **Non-native Plant Stressor Indicator (NPSI)**
 - Relative Cover of Non-native Species
 - Non-native Species Richness
 - Relative Frequency of Occurrence of Non-native Species

* Photos: Galveston Bay Estuary Program's "The Quite Invasion"

Physical Indicators of Stress

- **Vegetation Alteration**
 - Vegetation Removal
 - Vegetation Replacement
- **Hydrologic Alteration**
 - Damming
 - Ditching
 - Hardening
 - Filling/Erosion

Chemical Indicators of Stress (Soil)

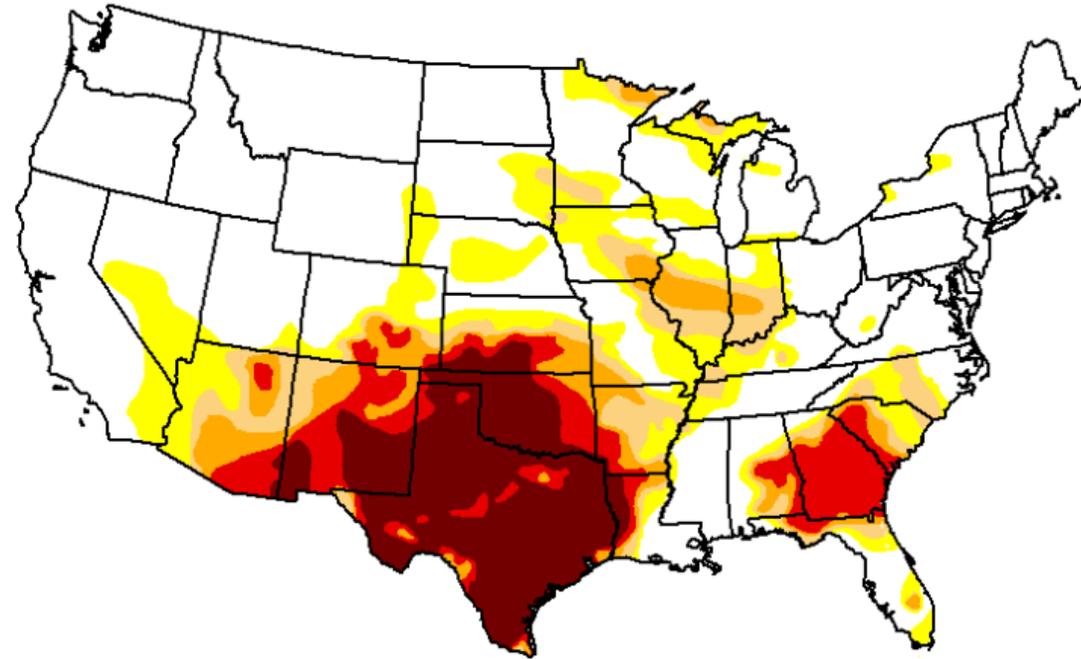

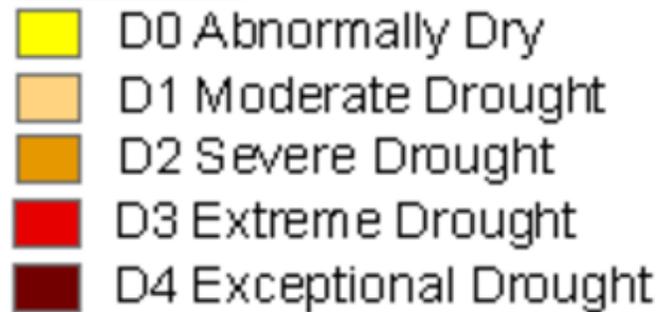

- **Heavy Metal Index**
 - 12 metals associated with anthropogenic activities
 - Stress-level thresholds, based on natural background concentrations (not toxicity)
 - ≥ 3 thresholds exceeded = **high** stress
 - 0 thresholds exceeded = **low** stress
- **Soil Phosphorus Concentrations**
 - Natural variation
 - Soil type
 - Wetland type
 - Climate
 - Localized reference site approach

Qualifiers

U.S. Drought Monitor
September, 2011

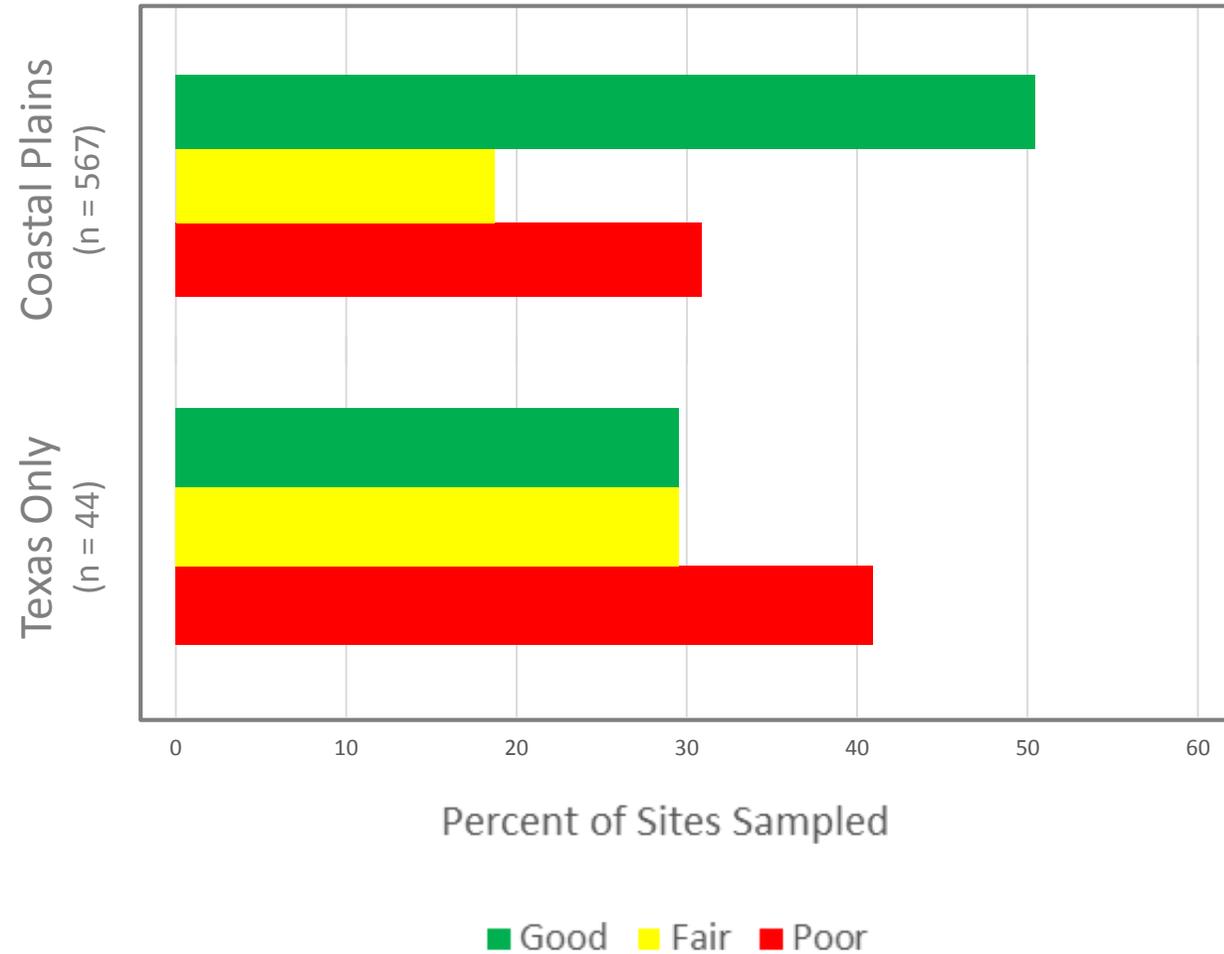

Intensity:

- Study design was *not* intended to evaluate at state level
- *Snapshot* of wetland condition
