Public Lecture:

CLIMATE CHANGE AND THE SIX DELUSIONS

*Buddhist perspectives on self, responsibility, and climate change*

About

UH-Clear Lake has recognized that sustainability requires education, collaboration, and a long-term vision in order to make a difference in our communities and impact in our world for generations to come. According to the IPCC, human influences on the climate are making extreme weather events—like heat waves, heavy rain, and droughts—more frequent and severe, putting more people, property, and natural resources in harm’s way (climate.gov). Understanding these impacts and providing opportunities to share and learn different perspectives for responding to these challenges better enables us to discover and create sustainable, holistic solutions.

Join the UHCL College of Human Sciences and Humanities and Institute for Human and Planetary Sustainability (IHAPS) in welcoming the visiting monks of Gaden Shartse Norling Monastery as part of their Sacred Arts of Tibet Tour.

The mission of IHAPS is to promote innovative solutions and sustainable outcomes to global challenges through a multi-disciplinary approach bringing social, economic, environmental, and educational perspectives to the forefront.
